

Appomattox Fiber Broadband Build

Firefly is currently installing fiber broadband and VoIP services in Appomattox! However, poor weather and contractor shortages have combined to put Firefly about 60 days or so behind the original connection schedule. The good news is that we've ramped up significantly, and are now rolling along at a faster pace!

The Appomattox fiber build will include CVEC members served by the Appomattox substation along **portions** of the following roads:

We plan to complete the installations of the pre-registered customers in Appomattox by the end of April, 2019. When your address is confirmed ready for service, we'll immediately notify you, using the email provided during pre-registration. The email from Firefly will provide a link to the online system used for gathering the info needed for the next step in the process. That includes your payment method, billing preference, and desired installation appointment date. Each day we check for newly activated addresses, and promptly notify those folks of the good news. Thank you for your patience. We look forward to your joining the Firefly community soon!

Nelson County is served by five substations. Only members who receive power from the Martin's Store will be included in the build at this time. CVEC members in other parts of the county will be connected over the next five year.

Construction of the mainline fiber-optic network is currently underway. If you have not already pre-registered, [click here](#) to schedule fiber drop construction for your home.

Beginning in May, after the drop is activated, you will be contacted as outlined above.

Thank you for your interest in Firefly Fiber Broadband. We look forward to serving you!
