

Tip #3 – Use Whole Home WiFi to Expand In-Home Coverage

Overview

Having trouble connecting to Wi-Fi in certain areas of your home? Does your device sometimes disconnect from the network, or take forever to download large files, or pause or stop altogether while streaming movies?

Unfortunately, in some homes, especially larger ones or those that use building materials like stucco or concrete, some spots can be hard to reach. When you try to connect your laptop or other device when you're in one of these "dead zones", the Wi-Fi connection is either too slow or you can't get a Wi-Fi signal at all.

You may wish to consider a home Wi-Fi solution that's designed to address these common problems with home Wi-Fi networks. That solution is a product from Firefly called Whole Home WiFi. It significantly expands the range and throughput of your wireless network by using an exciting new technology called Mesh Wi-Fi Extenders.

Mesh Wi-Fi combines your router with one or more small wireless devices—called mesh extenders or mesh satellites—which a Firefly tech will place in different rooms in your home. These extenders communicate directly with the router to provide you with a strong Wi-Fi signal everywhere, whether it's your bedroom, your home office, or even your backyard.

Another benefit of Whole Home WiFi is that you can roam freely in your home with any of your devices and not have to worry about losing your connection or dealing with poor performance. Your Wi-Fi password is applied automatically when you are within range of a Wi-Fi extender. Whole Home WiFi automatically connects you to the nearest extender with the best signal!

In addition to solving your biggest home Wi-Fi challenges and giving you outstanding performance throughout your home, Mesh Wi-Fi offers other compelling advantages. For starters, it's cost effective, priced at just 5.99/month. Second, it's convenient. Firefly manages your Whole Home WiFi network for you. Our experienced support team is just a phone call away. They can access your Wi-Fi network remotely, figure out the source of your problem, and make the appropriate changes without having to send a technician to your home.

Contact Firefly today If you're ready to move on from your current Wi-Fi challenges. A Firefly tech will install Home Home WiFi for you, so you and your family can enjoy worry-free Wi-Fi that just works.
